

What our customers are saying about ecowire

“The ecowire was amazing to install. The weight and ease of tying made installation much quicker and hassle-free. It required one person to install and the safety aspect compared to metal wire was very comforting. I will definitely be switching to ecowire for all future requirements.”

Robyn Johnston
Vineyard Manager, Bellarine Estate

“We ran the ecowire in between two hotwires to make a three wire fence. The ecowire has performed well and maintained its strength throughout the process. We would recommend it as an alternative to metal wire for fencing.”

David Wearn, Wearn Farming Ltd
Dairy/Beef Farmer, Matamata

“I found ecowire very easy to work with. We used it on a standard 5-wire fence. Ecowire retained its strength and tension even with my stock leaning on it. A huge bonus with the price saving from traditional metal wires.”

Steve Steward
Dairy Farmer, Matamata

The strong, light, easy-install wire

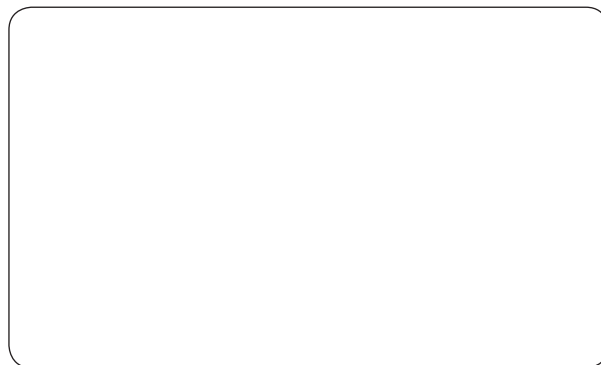

ecowire is available in several diameters for a variety of applications. Use this handy table to help you select the ecowire that's right for your next job.

Diameter mm	1.8	2.2	2.6	3	4	5
Ø min mm	1.66	2.05	2.4	2.77	3.7	4.7
Ø max mm	1.94	2.35	2.8	3.22	4.3	5.3
Mtrs per Coil/Spool	2750	1800	1350	1020	500	500
Kgs per Coil/Spool	10	10	10	10	9	14
Mtrs/kg	275	180	130	100	55	35
Break Strength (Kg)	120	190	240	350	550	750

100% POLYESTER (PET) MONOFILAMENT WIRE.

The strong, light, easy-install wire

For agriculture, horticulture & viticulture.

What is ecowire... ?

ecowire is a lightweight, 100% polyester fencing and crop wire. **ecowire** has a low stretch factor requiring minimum maintenance which makes it the ideal, low-cost substitute for metal wire in a wide range of agricultural, horticultural and viticultural situations.

Use **ecowire** to provide strong, safe fencing for your livestock, wire trellis support for your valuable vines or even in the construction of windbreaks. We also recommend using **ecowire** in greenhouses for shading and roofing solutions.

Easy Installation...

Lightweight and easy to install, **ecowire** overcomes the handling and safety issues associated with metal wires whilst providing those all important properties – strength and tension.

Proven Performance...

Developed following years of research into safe, sustainable and low-cost fencing alternatives. Independent laboratory tests have determined **ecowire's** performance in a wide range of weather conditions.

Trials conducted in New Zealand and Australia show that **ecowire** performs well over time and under heavy load.

Significant Savings...

With substantial savings on comparative steel wires, faster, safer installations combined with easier handling and transportation, **ecowire** represents a significant, cost-effective breakthrough for fencing and crop support.

ecowire

The ecowire advantage...

LIGHTWEIGHT

A 1350m reel of 2.6mm **ecowire** weighs in at just 10kgs. One-man installations are a breeze!

HIGH BREAK STRENGTH

Far exceeds recommended tensioning rates of steel wire.

LOW MAINTENANCE

Retains tension under load and joins are repaired with a simple knot, or traditional devices.

EASY TO INSTALL

No special equipment required – **ecowire** can be installed with traditional fencing tools and has a tensioning rate of 1 mtr per 100 mtrs.

SAFER THAN STEEL

ecowire's smooth surface won't harm valuable plants, animals or your hands and its lighter weight means far less strain on your back.
